

Ensure that remote employees can work safely and securely, without compromising the cybersecurity of your organization.

Cyber Awareness

The digitization of businesses in recent years has increased their exposure to cyberattacks. This, together with the increased number of people working from home since the onset of the Covid-19 pandemic, has given hackers an even greater 'in' to exploit.

Run by our expert Red Team hackers, our cyber awareness training uses a highly-effective, hands-on methodology that gives your general employees a greater level of awareness of the cyber risks they face, and what they should do to avoid them.

Based on factual case studies, all our training programs can be customized to the threat model, attacker profile and specific vulnerabilities relevant to your organization, as identified through our extensive intelligence and profiling efforts.

Participants

- General Employees

Prerequisites

- None

Training Outcomes

- Awareness of new variants of scams and cyberattacks
- Action plan to protect against unsecure home computers

Duration

- 3 hours (half a day)
