

Give your company executives and senior management an understanding of what to do in the event of a cyberattack on your organization – and how to do it.

Cyber Strategy - Executive Workshop

In the event of a cyberattack, your company executives and senior management will have to step up and make some tough decisions. Our quickfire, intensive cybersecurity workshop addresses the most critical issues that they may encounter in real life.

Participants will gain an insight into their own role and responsibilities in the event of a cyber incident, and those of your cybersecurity team; uncover key elements of decision-making in the cybersecurity world - including compromises, business impact evaluation, and more; acquire basic knowledge of threat detection and mitigation; and review some common cyber-response strategies.

Participants

- Executive Leadership (CEO, Board of Directors)
- Senior Management (C/V-level)
- CISO

Prerequisites

- None

Training Outcomes

- Acquisition of the theoretical knowledge and first-hand experience required to successfully manage a cybersecurity incident, from a managerial perspective

Duration

- 7 hours
