

Provide your executives with invaluable insights on effective cross-team interaction, communication, and management in a high-pressure environment.

Cyber Tactics for Management

In the course of a sophisticated, ongoing cyberattack, senior management is required to play a vital part in the decision-making process. This training session provides the necessary background information, skills, and concepts required to successfully manage a cyber crisis in your organization.

During the training, participants will study well-established best practices and actual case studies, and experience a live cyberattack in our cyberwarfare arena. They will finish with invaluable insights into effective cross-team interaction, communication and management, in a highly-stressful environment.
