

Give your incident response teams insights into how hackers work, and how to effectively conduct investigations into cyber incidents.

Cyber Threats and Defense Essentials

In order to carry out an effective incident response, your team needs an understanding of the key threats, attacks, and dangers of cyberspace, together with the essential methods and concepts required to protect your organization.

This training gives participants a deep insight into how hackers try to infiltrate critical infrastructures and assets, along with excellent working knowledge of the main tools used by cybersecurity professionals to investigate an incident, collect initial evidence, and prepare all materials and information required for an effective investigation.

Participants

- IT/OT Professionals
- Incident Response Team Members

Prerequisites

- IT background

Training Outcomes

- Acquisition of the initial theoretical background and skills required to perform cyber incident investigations and evidence collection
- Familiarity with and working knowledge of cybersecurity investigation and monitoring tools

Duration

- 16 hours (8 x 2-hour days)
