

Give your management team the ability to make the correct, timely decisions in the event of an attack on your organization.

Training Outline

Cyber Crisis Management

In the course of a sophisticated, ongoing cyberattack, senior management is required to play a vital part in the decision-making process. Effective handling of the event is dependent on the speed with which the correct decisions can be made and implemented. This training session provides the necessary background information, skills, and concepts required to successfully manage a cyber crisis in your organization.

During the training, participants will study well-established best practices and actual case studies, and experience a live cyberattack in our cyberwarfare arena. Your executives will finish the training with invaluable insights into effective cross-team interaction, communication and management, in a highly-stressful environment.
