

Enhance awareness of essential cybersecurity issues, providing personnel throughout your organization - regardless of their technical skill level - with a broad overview of the cybersecurity industry.

Cybersecurity Awareness - Essentials Workshop

As organizations continue to go digital, their exposure to cyberattacks grows. 95% of attacks that succeed could be prevented by giving personnel throughout your organization critical cyber awareness training.

In this fast-paced yet comprehensive workshop, participants gain an insight into essential topics such as threats, attacks and dangers, along with methods and concepts required to protect an organization, and insights into how hackers try to access and exploit critical data.

Participants

- General Employees
- IT/OT Professionals
- Software Developers

Prerequisites

- None

Training Outcomes

- Understanding and knowledge of the latest security developments in cyberspace
- Experience in all stages of a complex cyberattack targeted at organizations
