

Learn about fundamental cyber concepts, architectures and methodologies, and gain the tools and hands-on experience required to become a security specialist in your OT/ICS environment.

ICS Distribution - Defense Essentials

This program is specifically aimed at security and technical professionals working in industry sectors - such as electricity, power and water - that depend on physical and technological distribution infrastructure to provide their services.

Participants gain an understanding of the fundamental concepts, architectures and methodologies, along with the tools and hands-on experience required to become security specialists in OT/ICS environments.

Training includes a unique combination of theoretical lectures, hands-on exercises, and a live cyberattack experience in our cyberwarfare arena, fine-tuned to emulate the specific processes, technical elements and attack vectors of infrastructure and technologies in a distribution-based ICS organization.

Participants

- Tier 1 Security Analysts
- Incident Response Team Members
- IT/OT Professionals

Prerequisites

- Familiarity with general networking principles, architecture and protocols
- Understanding of basic information security concepts and tools

Training Outcomes

- Acquisition of the theoretical knowledge and practical experience required to monitor and protect critical distribution infrastructure in an OT/ICS organization

Duration

- 24 hours (3 x 8-hour days)
